SUMMARY

Results-driven **DevOps Engineer with 5 years** of experience building scalable, secure, and cloud-native systems across **AWS, Azure, and GCP**. Proficient in **infrastructure as code (IaC), CI/CD automation, Kubernetes, and GitOps workflows**. Proven track record in cloud migration, compliance automation, and cross-cloud infrastructure deployments. Passionate about driving velocity, reliability, and cost-efficiency using DevSecOps and SRE principles.

SKILLS

AWS Services: EKS, Fargate, EC2, RDS, Lambda, VPC, IAM, ECS, Billing, Cost Explorer, CloudWatch, EventsBridge, DynamoDB, API Gateway, Amazon Cognito, SES, S3, CloudFront, Route53, Subnetting, AWS Networking, Elastic Beanstalk, Amplify, Developer Services, i.e.

Azure: AKS, VM, Site Recovery, MySQL for FlexibleServer, Data Factory, App Logics, DNS, Vnet, Azure BackUp, Azure Functions.

GCP: GKE, CloudRun, GCE, Artifact Registry, Compute, Monitoring, SSC, ARM.

DevOps Tools: Kubernetes, Terraform, Terragrunt, Ansible, Jenkins, ArgoCD, Helm, Docker, CloudFormation, Git, GitHub Actions, GitLabCI, BitBucket Pipeline, Grafana, Prometheus, DataDog, Ploi.

Programming Languages: Python, Bash, C++.

Security & Compliance: AWS Security Hub, Inspector, Detective, CloudTrail, AWS Config, WAF, VPC, Azure Security Center, Google Cloud Security Command Center (SCC), Audit Logs, Azure Resource Manager (ARM), Google Cloud Armor.

OS & Web Servers: Linux, Windows, MAC, Apache, Nginx.

WORK EXPERIENCE

DevOps Engineer | [VITALSTEER](#) | LAHORE

April 2024 – Present

- Developed and deployed 10+ Python and Java microservices via GitLab CI/CD to AWS ECS, implementing centralized compliance and security policies to improve audit readiness and reduce manual governance overhead by 40%.
- Designed and deployed 15+ AWS Lambda functions for scheduled automation, integrating with API Gateway, DynamoDB, Step Functions, and AWS Fargate—automating workflows and reducing manual intervention by 60%.
- Managed Kubernetes infrastructure using Terraform and Terragrunt with ArgoCD, configuring components like Istio, HPAs, StatefulSets, and Karpenter, improving deployment reliability and enabling auto-scaling across 3 environments.
- Created end-to-end CI/CD pipelines for Django applications deployed to Azure and dedicated servers, reducing deployment time by 50% and enabling reliable weekly releases.
- Migrated legacy monolithic PHP and mobile applications to Azure, utilizing Azure Site Recovery and Load Balancer to enhance disaster recovery and achieve 99.9% high availability.
- Deployed and configured Kurento Media Server on Azure VMs and VPS, integrating ICE, STUN, and TURN protocols to enable real-time communication features for PHP and Python-based applications.

- Designed and implemented high availability and disaster recovery strategies using AWS Route 53, Auto Scaling, and Multi-AZ deployments, achieving consistent 99% system uptime.
- Migrated 10+ applications from on-prem to AWS (EC2, RDS, S3), optimizing resource provisioning and reducing infrastructure costs by 20%.

- Orchestrated migration of 5 legacy enterprise systems to AWS, resulting in 30% operational cost reduction and 20% improvement in system reliability through cloud-native architecture.
- Enhanced web application security using AWS WAF rulesets and provisioned 50+ virtual desktops via AWS Workspaces for remote teams, improving security and remote productivity.
- Designed infrastructure cost-optimization and least-privilege IAM policies, establishing centralized compliance controls and reducing cloud spend by 15%.

- Assisted in deploying ML workloads on GPU-enabled EC2 instances (P3), enabling model training acceleration by 2x.
- Configured AWS Amplify for deploying serverless web applications, enabling CI/CD and user authentication integration with Cognito.

PROJECTS

1. Scalable Microservices Deployment on AWS EKS with GitHub Actions, ArgoCD, Helm & Terraform

Description: Led the migration of a suite of monolithic APIs and applications to a containerized microservices architecture on AWS EKS. Replaced manual scripts with GitOps workflows and integrated Helm chart templating for environment-specific configuration.

- Reduced deployment time by **50%** and enabled blue/green deployment strategies.
- Scaled the platform to handle **3x user traffic** with zero downtime during release cycles.
- Implemented RBAC policies and network policies across namespaces for isolation.

Tools Used: AWS EKS, GitHub Actions, ArgoCD, Helm, Terraform, Docker, Kubernetes RBAC, Karpenter

2. Cloud Migration from On-Prem to AWS Microservices Architecture

Description: Migrated a legacy PHP monolith and associated mobile backend APIs to AWS, using ECS Fargate and AWS RDS. Re-architected the system using event-driven microservices and decoupled storage.

- Improved application performance by **30%** through load-balanced services.
- Reduced infrastructure costs by **25%** through on-demand auto-scaling and removal of idle capacity.

Tools Used: AWS ECS, RDS, Lambda, S3, API Gateway, Step Functions, CloudWatch, SES, SNS

3. Kubernetes Continuous Delivery on GCP with GKE, ArgoCD & Helm

Description: Designed and deployed multiple stateless and stateful applications on GKE. Used ArgoCD for GitOps-based deployment automation and Helm for dynamic chart management.

- Reduced deployment errors by **40%**.
- Enabled feature delivery cycles to shift from **monthly to bi-weekly**.

Tools Used: Google GKE, Helm, ArgoCD, GitHub, Artifact Registry, Cloud Monitoring

4. Hybrid Cloud Disaster Recovery Between Azure & AWS

Description: Engineered a highly available hybrid DR architecture that leveraged AWS Route 53 failover and Azure Site Recovery to provide seamless failover between two cloud platforms.

- Achieved **99.9% SLA uptime**.
- Cut business downtime risk during outages by over **80%**.

Tools Used: Azure Site Recovery, AWS Route53, VNet Peering, DNS Failover, S3 Cross-Region Replication, Azure Monitor

5. Multi-Cloud CI/CD Automation (AWS, Azure, GCP)

Description: Built a platform-agnostic CI/CD pipeline that unified deployment workflows across multiple cloud providers. Created reusable pipeline modules for all services and environments.

- Reduced release cycle times by **60%**.
- Created consistency in pipeline governance and rollback strategies.

Tools Used: GitLab CI, Jenkins, Terraform, GitHub Actions, Docker, CloudFormation, Azure DevOps

6. Enterprise Kubernetes Infrastructure for Multi-Region AWS Deployment

Description: Designed and deployed a global, fault-tolerant Kubernetes platform using EKS across multiple AWS regions. Integrated external-dns, cert-manager, and cross-region secrets management.

- Achieved **zero-downtime deployments** globally.
- Improved latency and failover response through traffic splitting and geo-DNS routing.

Tools Used: AWS EKS, Karpenter, Helm, ArgoCD, External-DNS, AWS Secrets Manager, Route53 GeoDNS

7. GitOps Platform Design for Enterprise Infrastructure

Description: Architected a scalable GitOps-based infrastructure management platform for managing multiple Kubernetes clusters. Used **ArgoCD** for application reconciliation and **Helmfile** for templated configuration of services across environments. Enforced Git as the single source of truth for cluster states.

- Reduced drift-related outages by **90%**.
- Enabled full infra reproducibility from codebase within minutes.

Tools Used: ArgoCD, Helmfile, GitHub, Terraform Cloud, External Secret Operator, AWS Secret Manager, Kubernetes, EKS.

8. Policy-as-Code Security Pipeline with Open Policy Agent & CI Enforcement

Description: Built a centralized security enforcement layer using OPA + Conftest, embedded into CI pipelines. Validated Kubernetes manifests, Terraform code, and Dockerfiles against security rules before deployment.

- Blocked **100% of misconfigured deployments** before they reached production.
- Improved security posture auditability across all teams.

Tools Used: Open Policy Agent (OPA), Conftest, Terraform, Kubernetes Admission Controller, GitHub Actions, AWS Config, Sentinel (optional)

EDUCATION

The University Of Faisalabad

Bachelor of Science in Computer Engineering (3.59/4.0)

September 2017 – October 2021

CERTIFICATIONS & DEVELOPMENT

- Certified Kubernetes Administrator (CKA), Kodacloud
- AWS DevOps Engineer Professional DO-C02
- AWS Certified Developer Associate, AWS, Udemy
- DevOps Zero to Hero, YouTube
- Azure Administrator AZ 104, Udemy, Kodacloud
- Professional Cloud Architect, GCP
- AWS Cloud Practitioner, AWS
